AB - J07070875 Towel fabric (5) is woven by using mainly cellulosic fibre in pile yarn (1), and contg. cellulosic fibre in warp ground yarn (2) and weft ground yarn (3). At least either one of warp ground yarn (2) or the weft ground yarn (3) contacting to base (7) of the pile (6) formed by the pile yarn (1) contains very fine polyester fibre having 0.9 d. or less of fineness 30-60 wt.%.
- The very fine polyester fibre occupies 3-30 wt.% of wt. of the ground weave texture ground fabric formed with the warp ground yarn and the weft ground yarn.
- USE/ADVANTAGE - The towel fabric is useful for towel, handkerchief, sheets, bath robe, parka, cover of a toilet seat. Towel fabric maintains flexible and soft handling touch and has high water absorptive property. The ground weave texture ground fabric covered with the pile of the towel fabric is occupied with non-hygroscopic very fine polyester fibre in 3-30 wt.% of the warp or weft ground yarn. It is easily dried after use. Since the very fine polyester fibre constituting the ground weave texture ground fabric has strong physical property compared with the cellulosic fibre, the towel fabric has good durability.
